Specifications

Length :	1 780 mm (70»)
Working width :	2 400 mm (95")
Width du smoother-finisher :	2 580 mm (102")
Overall height :	1 400 mm (55")
Frame height :	800 mm (31")
Weight :	850 kg
Teeth spacing :	50 mm (2")
Teeth diameter :	20 mm (.8")
Expanded-steel finish screen :	50 mm x 50 mm (2" x 2")

Performance

Working width :	2 400 mm (95")
Working depth :	0 to 150 mm (0 to 6")
Can be used on dry or wet sand :	suited to all grain sizes and to pebbles (up to C 60/80)
Type of waste :	seaweeds, reeds, wood, plastics, cans, large debris..
Area efficiency :	up to 4 ha/h depending on beach conditions

Tractor requirements

- Tractor recommended power: from 70 HP
- Coupling: rear lift arm and 3-point hitch
- Hydraulic cylinders: 2 double-action

Deals with all beach configurations

The G250 L rake features a screen and a smoother-finisher operated hydraulically from the tractor controls. It is suited both to cleaning operations, following major storms, and to regular beach maintenance works.

For small beaches with low turning areas, difficult access, sloppy areas, exposed rock fills, or for very large areas, the G250 L rake is perfectly suited to all work conditions. Use the screen to rake papers, wrappings, paper tissues and other small solid waste.

The smoother provides an impeccable finish quality. It is suitable for all cleaning phases before the summer season and during the post-season period. You can also alternate the G250 L rake with the sifter.

A simple, robust and reliable design, to cut your operating costs:

The absence of maintenance operations and consumable parts, along with an optimal area efficiency, cuts your operating costs while ensuring a high-quality beach cleaning.

- The spring-mounted teeth are individually retractable, which eliminates all risks of breakage when going over obstacles
- The side deflectors retain high volumes of debris and simplify stockpiling or windrow piling
- The frame is very robust and features a double chassis:
- the carrying chassis bears the 3-point hitch and adjustable gauge wheels
- the main chassis is solidly cross-braced; it bears the teeth and is connected to the carrying chassis by four pivot pins.

In our workshops located on the Aquitaine littoral, we have manufactured machines for cleaning beaches and sandy areas (hippodromes, riding centers, water treatment basins, agricultural areas, etc.) for more than 25 years.

Thanks to our close proximity to the littoral environment, along with our large customer base around the world and our passion for innovation, «Canicas» is now a brand of reference well-known for its robustness, reliability and performances.

A company close to its customers, and high-quality services:

- A constant supply of spare parts
- An after-sale service provided by our skilled technicians
- Fast response times ensured by our workshop trucks or tool-carrier trucks in France, and by our distribution network abroad.
- Rental of machines.
- Loan of machines in the event of accidental damage to cope with machine downtime.

Our company reserves the right to change at any time the products proposed to and referenced by our customers, without notice and without entitling the reader to damage or interest.
